WOOD'S CROP SPECIAL

Giving Timely Information and Prices of Seasonable Seeds

PUBLISHED BY T. W. WOOD & SONS SEEDSMEN RICHMOND VA.

VOL. XIX.

MARCH EDITION

1924

Our "Wood's Crop Special" is issued monthly during planting seasons. There is no subscription price, but is mailed free upon request. If any of our customers do not receive Wood's Crop Special regularly, and desire to do so, advise us and we will place your name on our regular mailing list.

SEASONABLE NOTES

For forty years T. W. Wood & Sons have preached and practiced the doctrine of **GOOD SEEDS**. During this time under our **TRADE MARK BRAND**, we have been sending out to our customers seeds of the very best quality, acclimated and conditioned to the locality in which they were to be used. It was hard, up-hill work, as cheap seeds were so attractive to so many of our merchants and farmers, but at last we are reaping the harvest. Agricultural Colleges, Crop Improvement Associations, Farm Bureaus and other farm service organizations are all now actively pushing this doctrine, and the practical farmer has at last come to see that in order to reap good crops he must use the best seeds. Such are **WOOD'S TRADE MARK BRAND SEEDS**.

During the past month there has been a good demand for all grasses and clovers, which indicates that there will be a large acreage planted to these crops for hay and pasture. Prices on practically all seasonable seeds are firm, and we believe that values are as low as high quality seeds will be obtained this season.

Owing to the variation in prices of domestic and French-grown Red Clover, we are printing in this issue the results of comparative tests made in various sections of the United States by the Department of Agriculture, which we believe will be of interest to our customers. We can supply either **Northwestern American-grown** or Northern French-grown Red Clover of the very highest quality.

As predicted in our February **Crop Special**, there has developed an acute shortage of Maine-grown Irish Cobbler Potatoes, with the result that there has been quite an advance in prices. We just received a letter from one of the largest distributors of Maine Potatoes, predicting that Irish Cobbler Potatoes would bring \$8.00 to \$9.00 per bag the coming season. We confidently believe that early purchases will be profitable.

JAPAN CLOVER is coming into more prominence throughout the Middle Atlantic States for use as a restorer of thin pastures. It thrives exceptionally well on poor soils, spreading very quickly, and furnishes an excellent crop for worn out fields. In the Southern States a mixture of ten pounds Japan Clover, eight pounds Carpet Grass and three pounds Bermuda Grass has been found to give a fine grazing crop. Give this legume a trial on any fields that are not producing.

SEED POTATOES

First-class Maine-grown Irish Cobbler Seed Potatoes this year are extremely scarce, and at the present time are practically unobtainable in Maine. Our contracts this year were made with the Maine Potato Growers' Exchange for supplying our farmers with the best Maine-grown seed. This Exchange handles only two distinct types of potatoes for seed purposes—the **Certified Stock**, which have been inspected and certified by the Maine Department of Agriculture, and their regular inspected, but not certified stock, sent out under their Pine Tree State Brand. We were fortunate in making large contracts with this Exchange, and are now having these potatoes brought forward to Richmond for our trade, and are offering them at very reasonable prices considering the present high market for this class of potato in Maine. The certified seed potatoes are commanding a premium of about \$1.00 per bag over the Pine Tree State Brand. The Pine Tree State Brand has been field inspected by the Potato Exchange to avoid disease and mixture, and are first-class seed potatoes in every respect.

The Maine Potato Growers' Exchange will not send out for seed purposes anything but the best stock, and any potatoes grown which do not come up to their requirements for seed purposes are shipped to Boston to be sold for eating. These potatoes, unfortunately, have been bought up and shipped to the South through some potato dealers and are now being offered at a cheap price for seed stock. They should not be used for planting, as the crop results will not be satisfactory.

Therefore, we are advising our customers to plant only seed potatoes grown, raised and assorted for seed purposes, such as are offered under the Maine Growers' Exchange brands.

Virginia Second Crop Seed Potatoes have been in very heavy demand this season, due to the excellent results our customers have obtained in previous years. Our supply of Virginia Second Crop Red Bliss are entirely exhausted, but we still have limited quantities of the Irish Cobbler variety. Reports from all of the Southern States such as, "They brought an abundant crop and will double the yield of Maine seed," convinces us of their superior yielding qualities. Second Crop Potatoes are slightly smaller than the Maine stock, and being lower in price, are the most economical potatoes to plant this spring.

The Second Crop Virginia Grown Potatoes will double yield the Maine seed that we usually get, planted side by side.—R. H. GLEASON, Citrus Co., Florida, Nov. 29, 1923.

SEED GRASSES and CLOVERS IN MARCH

Early seeding during this month is the safest time for satisfactory stands. Clovers and Grasses are the surest basis of prosperity on the farm. They require less labor than other crops, and when once established give abundance of pasturage or hay for several years, as well as vastly improving the soil for future crops.

Clover seed can be sown to the very best advantage on your wheat or other grain crops, which were put in last fall. The only preparation necessary is to run a sharp-tooth harrow over the grain field, both before and after seeding, in order to loosen the surface and give the seed a light covering. This does not injure the grain crop, but is a decided benefit, acting as a cultivation.

WOOD'S SPECIAL GRASS AND CLOVER MIXTURES are recommended highly for sowing either alone or on grain crops. These mixtures are composed of only our Trade Mark Brand quality seeds, and prepared in such proportions as experience has shown are best suited to the different soils and purposes for which they are recommended. We are listing below actual experiences of our Special Mixtures with our customers last year. We are safe in saying that larger yields of both hay and pasturage will be obtained from the use of these mixtures than sowing either clover or grass seed alone, besides making a better balanced feed.

A few of our customers experiences with **Wood's Special Grass and Clover Mixtures:**

"The Finest Stand That I Know Of."

I ordered last spring of you No. 3 Grass Mixture. I sowed same in the spring with oats the 1st day of March, and now I have the finest stand of grass that I know of.—WADE M. BRYANT, Caldwell County, N. C., October 22, 1923.

Fine On Poor Hillsides.

I have used your Grass Mixture No. 1 for pasture on various kinds of soil, and am glad to say it is fine. Of course the better the land and preparation the better the results; though I have grown it on poor hillsides, sown on stiff land and harrowed in with good results.—J. E. CHATHAM, Alexander County, N. C., October 23, 1923.

Both Hay and Grazing.

I used your No. 6 Grass Mixture on a lot sowed last year and cut a good crop of hay this spring. Have been using the lot for grazing since and gotten good results from it.—A. P. CRADDOCK, Campbell County, Va., August 23, 1923.

Our customers are continually asking our opinion as to what they can plant for a quick, early pasture. For this purpose we can highly recommend our **WOOD'S SPRING PASTURE MIXTURE**, which is composed of Spring Barley, Oats, Rape and Vetch, combined in proper proportions to make a quick and early nutritious grazing for all kinds of live stock. This mixture is one of the best supplements to your regular grass and clover pasture, and is just what is needed for a quick crop.

THE BEST STRAINS OF COTTON SEED

Can now be secured at reasonable prices, but owing to the heavy demand from sections that will put in their first crop of cotton, there is every indication that early buying would be advisable, as the best stocks will be taken up very fast during March.

We have given the selection of our seed the most careful study and attention and all of our stocks were secured from reliable sources. In offering our varieties we believe they are as free from mixture and disease as is possible to obtain. Our seed stocks have been carefully selected and ginned to prevent mixture, and every precaution used to supply our trade with seed that can be depended upon for the best results. Planting mixed seed in the more northerly cotton growing States means considerable yield reduction, and seed of this character should be avoided.

Our entire seed stocks were drawn from the extreme northern section of North Carolina. Seed produced in this locality is far superior for the Southern States to stock secured further South, due to its quicker growth, which is so essential for a successful crop. Cotton, like corn, produced in higher latitudes will come quicker than those grown further South.

In order to give our customers complete information regarding the cotton crop and knowing that it will be a new adventure with a large number of Virginia farmers, we have especially prepared a cotton circular which gives complete information about the handling of this crop from practically every angle. Write for it.

SOW ALFALFA DURING MARCH

A prosperous farmer once remarked, "No farm is what it ought to be without an Alfalfa patch." With a good seed bed and good seed, there is very little risk of failure in obtaining a fine crop; in fact, our actual experience with Alfalfa convinces us that it is a surer crop than Red Clover, as Alfalfa is generally not so badly affected by drought or excessive rains. Alfalfa unquestionably will yield larger crops of splendid, nutritious hay than any other clover, and will yield nearly double the crops of hay that the ordinary Red or Mammoth Clover will produce. The requirements for a successful crop of Alfalfa are: A good seed bed, good soil, inoculation, and last, but not least, good adaptable seed.

SOW SPRING OATS EARLY

There will undoubtedly be a heavy demand for Oats throughout the South this year on account of the fact that a large portion of the fall sown crop was winter killed by the heavy freeze in January. Both the corn and oat crops are short in the Southern States, and we believe oats planted this spring will prove to be a profitable crop, especially if you have to buy your own feed on the open market. Be sure and sow enough acreage for your own needs, and more too, as oats can always be sold to advantage if you have a surplus, and we believe will bring good prices.

Outstanding Facts Regarding Red Clover

AS ISSUED BY U. S. DEPARTMENT OF AGRICULTURE FEB.

8, 1924, ENTITLED, "SOME FOREIGN RED CLOVER IS GOOD, BUT ITALIAN DOES NOT DO WELL HERE."

Italian Red Clover not adapted and should not be used in any part of the United States, with the possible exception of the Pacific Northwest.

The following are the results of tests made throughout the United States, showing the adaptability of French grown Red Clover in comparison to home grown seed:

At Ashland, Wisconsin, Red Clover from French seed produced 2.90 tons per acre; and home grown seed from Idaho, Tennessee, Wisconsin, Ohio and Oregon averaged 2.83 tons.

At Spooner, Wisconsin, French seed produced 1.94 tons and U. S. seed 2.19 tons per acre.

At Marshfield, Wisconsin, French seed produced 1.5 tons and U. S. seed 1.6 tons per acre.

At East Lansing, Michigan, French seed produced 2.25 tons, Michigan seed 2.48 tons and other U. S. seed yielded 2.18 tons per acre.

At College Park, Md., French seed 2.46 tons, Ohio seed 2.94 tons, Maryland seed 2.42, and Tennessee 2.26 tons per acre.

At Blacksburg, Va., French seed 1.35 tons, U. S. Seed 1.59 tons.

At State College, Pa., the foreign grown clovers, except the Italian, outyielded that grown from American seed.

The above results show that there is very little difference between American and French grown seed. The U. S. Department also states that the crop grown here is insufficient to meet the demand, and if all the Foreign Seed were poor the Department would not recommend its importation even in the face of the great shortage.

Due to the premium which American Grown Red Clover is commanding over imported seed, we believe the above information will be of interest to our customers who will need Red Clover the coming season.

We can supply either Northwestern American Grown or northern French Grown seed, and will give you what you order. **WE WILL NOT HANDLE ITALIAN CLOVER UNDER ANY CIRCUMSTANCES.**

Wood's Grass Mixtures "The Best Ever."

I must tell you that your Grass Mixtures are the best ever.—ELLA S. POTEET, Raleigh County, West Va., March 29, 1923.

No. 9. For moist bottom land.

Not prepaid, lb. 25c.; 10-lb. lots, 23c. lb.; 50-lb. lots, 21c. lb.; 100-lb. lots, 20c. lb.

LAWN GRASSES

(See PARCEL POST SPECIAL for Postpaid Prices.)

WOOD'S EVERGREEN LAWN GRASS

The best mixture for an all-year-round lawn, where proper care and attention can be given. One pound sows 400 square feet; 50 to 75 pounds per acre. Not prepaid, per lb., 35c.; 5 lbs., \$1.70; 10 lbs., \$3.30; 25 lbs., \$8.00; 50 lbs., \$15.50; 100 lbs., \$30.00.

WOOD'S DROUGHT-RESISTING LAWN GRASS

This mixture, containing Bermuda Grass, is especially recommended for the Southern States, where the finer grasses will not survive the extreme heat. One pound sows 300 square feet; 35 to 40 pounds per acre. Not prepaid, per lb., 40c.; 5 lbs., \$1.85; 10 lbs., \$3.60; 25 lbs., \$8.75; 50 lbs., \$17.00; 100 lbs., \$33.00.

WOOD'S PERMANENT LAWN GRASS

Composed of robust growing grasses, especially adapted for parks and large places where a lawn and grazing are to be combined. One pound sows 300 square feet; 40 to 50 pounds per acre. Not prepaid, per lb., 35c.; 5 lbs., \$1.60; 10 lbs., \$3.00; 25 lbs., \$7.25; 50 lbs., \$14.00; 100 lbs., \$27.00.

WOOD'S HIGH-GRADE FERTILIZERS

NOTE REDUCED PRICES.

STANDARD VEGETABLE FERTILIZER. Available Phosphoric Acid 8%; Ammonia 3%; Potash 3%. Bag of 50 lbs., \$1.15; 100-lb. bag, \$1.90; 200-lb. bag, \$3.40; per ton, \$32.50.

STANDARD POTATO FERTILIZER. Analysis 8-3-6. Bag of 100 lbs., \$2.00; 200-lb. bag, \$3.65; per ton, \$35.00.

STANDARD CORN FERTILIZER. Analysis 12-2-4. Bag of 200 lbs., \$3.35; per ton, \$32.00.

STANDARD COTTON FERTILIZER. Analysis 8-3-3. Bag of 200 lbs., \$3.45; per ton, \$33.00.

WOOD'S MARKET GARDEN FERTILIZER. Analysis 8-5-3. Prepared especially for market growers. Bag of 200 lbs., \$4.05; per ton, \$39.00.

WOOD'S GRASS AND LAWN FERTILIZER. Analysis 12-2-2. 10-lb. bag, 50c.; 25-lb. bag, 75c.; 50-lb. bag, \$1.20; 100-lb. bag, \$2.00; 200-lb. bag, \$3.45; per ton, \$33.00.

LISTER'S STANDARD SUPERPHOSPHATE. Analysis 9-3-2. Bag of 200 lbs., \$3.65; per ton, \$35.00.

STANDARD BONE MEAL. Analysis: Ammonia 3%; Phosphoric Acid 22%. Bag of 200 lbs., \$4.45; per ton, \$43.00.

ACID PHOSPHATE. Analysis: 16%. Bag of 200 lbs., \$1.75; per ton \$16.00.

NITRATE OF SODA. For forcing crops. 5 lbs., 40c.; 10 lbs., 60c.; 25 lbs., \$1.25; 50 lbs., \$2.00; 100 lbs., \$3.50; 200-lb. bag, \$6.65; 5 bags or more, \$6.50 per bag; per ton, \$64.00.

LIME MARL. Bag of 200 lbs., \$1.15; per ton, \$10.00.

WOOD'S HIGH-GRADE SHEEP MANURE. 25-lb. bag, 85c.; 50-lb. bag, \$1.50; 100-lb. bag, \$2.65; 500 lbs., \$12.00; per ton, \$45.00.

While we exercise great care to have all seeds pure and reliable, we give no warranty, express or implied, as to description, quality, productiveness, or any other matter connected with the goods we send out, and will not be in any way responsible for the crop. Every order for articles named in this price-list will be executed on these conditions only.
